    }
}

// Das folgende Listing zeigt die Spring Boot Application:
package ch.std.fileservice;
import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;

@SpringBootApplication
public class GenericFileServiceApplication {
    public static void main(String[] args) {
        SpringApplication.run(GenericFileServiceApplication.class, args);
    }
}
```

Das folgende Listing zeigt den dazu passenden Spring Boot File Service Client entwickelt als Command Line Applikation:

```
package ch.std.fileservice.client;

import java.io.FileOutputStream;
import java.net.URL;
import java.util.Arrays;
import org.springframework.boot.ApplicationArguments;
import org.springframework.boot.ApplicationRunner;
import org.springframework.boot.SpringApplication;
import org.springframework.boot.WebApplicationType;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.core.io.buffer.DataBufferUtils;
import org.springframework.http.HttpEntity;
import org.springframework.http.HttpHeaders;
import org.springframework.http.HttpMethod;
import org.springframework.http.MediaType;
import org.springframework.http.ResponseEntity;
```

```
org.springframework.http.converter.ByteArrayHttpMessageConverter;&#xA;import
org.springframework.web.client.RestTemplate;&#xA;@SpringBootApplication&#xA;public class
GenericFileServiceClient implements ApplicationRunner {&#xA;    public static void main(String[]
args) throws Exception {&#xA;        SpringApplication app = new
SpringApplication(GenericFileServiceClient.class);&#xA;
app.setWebApplicationType(WebApplicationType.NONE);&#xA;        app.run(args);&#xA;    }&#xA;
@Override&#xA;    public void run(ApplicationArguments args) throws Exception {&#xA;        URL url =
null;&#xA;        try {&#xA;            url = new URL(args.getOptionValues(&#34;url&#34;).get(0));&#xA;
        } catch (Exception e) {&#xA;            System.err.println(&#34;missing --url option
argument&#34;);&#xA;            this.help();&#xA;            return;&#xA;        }&#xA;        String out =
null;&#xA;        try {&#xA;            out = args.getOptionValues(&#34;out&#34;).get(0);&#xA;        } catch
(Exception e) {&#xA;            }&#xA;        RestTemplate restTemplate = new RestTemplate();&#xA;
restTemplate.getMessageConverters().add(new ByteArrayHttpMessageConverter());&#xA;
HttpHeaders headers = new HttpHeaders();&#xA;        HttpEntity entity = new
HttpEntity(headers);&#xA;        ResponseEntity response = restTemplate.exchange(url.toString(),
HttpMethod.GET, entity, byte[].class, &#34;1&#34;);&#xA;        if (out != null) {&#xA;            try
(FileOutputStream fos = new FileOutputStream(out)) {&#xA;
fos.write(response.getBody());&#xA;            }&#xA;            System.out.println(&#34;result written to file
&#34; + out);&#xA;        }&#xA;        private void help() {&#xA;            System.out.println(&#34;usage java -jar
genericfileclient-0.0.1-SNAPSHOT.jar --url= --out=&#34;);&#xA;
System.out.println(&#34;example:&#34;);&#xA;            System.out.println(&#34;java -jar
genericfileclient-0.0.1-SNAPSHOT.jar --url=http://localhost:8080/rest/file?path=in/bigimage.jpg
--out=out/bigimage.jpg&#34;);&#xA;        }&#xA;}&#xA;}&#xA;Das File bigimage.jpg kann ersetzt werden durch
eine real existierende Datei analog kann der Output Pfad angepasst werden.
```

Client und Service sind am besten in 2 separaten Spring Boot Projekten zu programmieren z.B. mit der Eclipse IDE.
